

MARCH 2021 RELEASE NOTES

New Feature

Title	Description
TracStar-BYOD	TracStar, our WMS, is going BYOD — Bring your own Device! It provides the ability to use Android and iOS-based devices whenever and wherever. It can be used in both our GSCs and FSLs. It reduces errors by scanning vs. manual key entry, has increased security functionality, and streamlines the pick, pack, and ship workflows — especially after hours.

Maintenance

Title	Description
Add/Edit Customer Order Type	Corrected issue where submit button was not visible during some scenarios.
Exception Alerts	Corrected issue where multiple emails were being sent for a single exception.
New Tracking button for TNT orders	To support improved order tracking visibility, we've added a button to Review Order screen that links TNT carrier AWBs directly to the TNT website to track the order.

Title	Description
Order Entry Maintenance	Removed default value for the return part information.
Updates to Messaging for User Creation	Updates and enhancements to email notifications when users are created. These include new emails to the requestor and to the user.
