

OCTOBER 2020 RELEASE NOTES

New Features

Title	Description
Order hierarchy removal	Improvements made to the functionality and process of removing Order Hierarchy(s), to drive efficiencies in data management.

Maintenance

Title	Description
Manual order entry field validation	Refined global validation parameters when determining orders were entered manually by Flash personnel.
Country name length	Updated warehouse master table to accommodate country names up to 40 characters.
Back-to-back holidays	Fixed a side case issue in SLA calculation when multiple holidays appear on consecutive days.
Blank spaces in part number field	Added logic to trim spaces off the part number that have been copied from outside sources.

Title	Description
Brazil Compliance HTS update	Update to share the Brazil HTS (NCM code) for all Brazil orders with the Import Export Management System.
Modify order entry / exception address validation	Added logic to streamline address validation, by refining the field validation and increasing reporting visibility.
New refurbished flag added to other areas	Added the new refurbished flag, which is used in warehouse bucket creation, to the pending warehouse request screen.
Port Cross Dock to Order Entry 2.0	Ported over the ability to create cross-dock orders to Order Entry 2.0 tool.
Update to alert type drop down list	Corrected a drop-down list issue when copying within the copy alert type screen.
Auto-replenishment Tool - Cosmetic	Stopped blank records from being added to the screen.
Manual alerts customer charges	We fixed an issue related to identifying customer alert vs internal flash alert creation.
